

ORIOLE TREASURE MATHS

The Bahama Oriole is a rare bird found only on Andros Island in The Bahamas. Its numbers are shrinking, and it needs brave heroes like you! Your mission: Study the map of Andros Island and the breeding grounds of the Bahama Oriole.

- Solve the math challenges below to unlock clues that protect the Oriole's home.
- Each correct answer brings you closer to becoming a Guardian of Nature!

1: How many breeding sites are there in total? _____

2. If there are 12 coconut palms and 4 Orioles build nests in each site, how many nests are there

3. What is the difference in number between the sites in North and Central Andros and that of Mangrove Cay and South Andros?

4: If there are only 300 species still in existence, what is the average amount of birds in each site?

5: Make a bar graph to show the number of Orioles that are found in each location.
